

Adaptations For Arthritic Dogs

**"80% of Dogs
over 8 years old
have arthritis"**

- Canine Arthritis
Management

**Arthritis can
affect younger
dogs too**

**Make these 6 changes to your pet's environment
and routine to help make life easier for them**

1 Non-slip rugs (or add anti-slip tape underneath)
on laminate/tiled floors to prevent slips

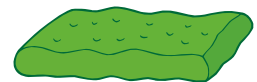

2 Raise food and water bowls off the floor

3 Adding ramps to steps they may struggle with

4 Get good quality, supportive bedding - try
memory foam

5 Do little exercise more often rather than big, long
walks less often

6 Avoid any impactful exercise such as jumping and
ball catching

**Spotting
arthritis**

Look out for mobility struggles, over-grooming,
becoming less interested in walks & interacting,
and not wanting to be touched.
